

615, Do not power off the Mac, or the Yamaha Board, please.

Instructions for getting audio into speaker from rehearsal iPad.

Make sure the speaker is powered on. Open the settings app. Open the Bluetooth section. Connect to DN-300Z, wherever it is on the page.

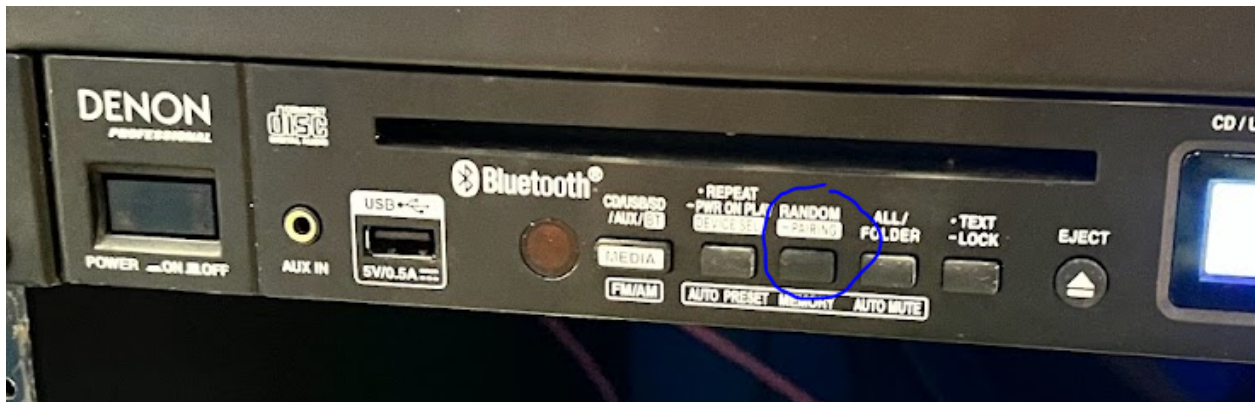

Play audio. It should work.

Troubleshooting steps

If it does not pair when you tap DN-300Z, hit the i button next to DN-300Z. Then, tap forget device.

Head into the booth of HLH, and go to the Denon Bluetooth receiver. Power it off, then on. After it turns on, press and hold the pairing button for three seconds. See reverse side.

The screen should show BT Pairing On.

Now connect the iPad to the DN-300Z. It should work now.

Last resort, connect the headphone to XLR cable to the iPad, then connect it to the input B on the speaker. Input A should remain in the speaker at all times for other purposes.

Let 612 or 615 if you have any questions regarding this process, and show 615 units this instructional sheet. Thank you.
